Aim and Motivation:

- We focus on the studies of Ethnic conflicts and Human Rights violations, and their relations with socio-economic factors in certain countries of the African continent and the Middle-East.
- Ethnic wars continue to be globally the most common form of armed conflicts, but the mechanisms that lead a society down the path of ethnic conflict are yet to be fully understood.

Data Sets Used:

1) **GDELT Event Database:** Extracted sums of the number of articles with event codes pertaining to ethnic conflict and human rights violations in countries of Africa and Middle-East.

2) **Human Development Index:** HDI data for countries from United Nations Development Programme. HDI is a composite statistic of life expectancy, education, and income per capita indicators, which are used to rank countries into four tiers of human development.

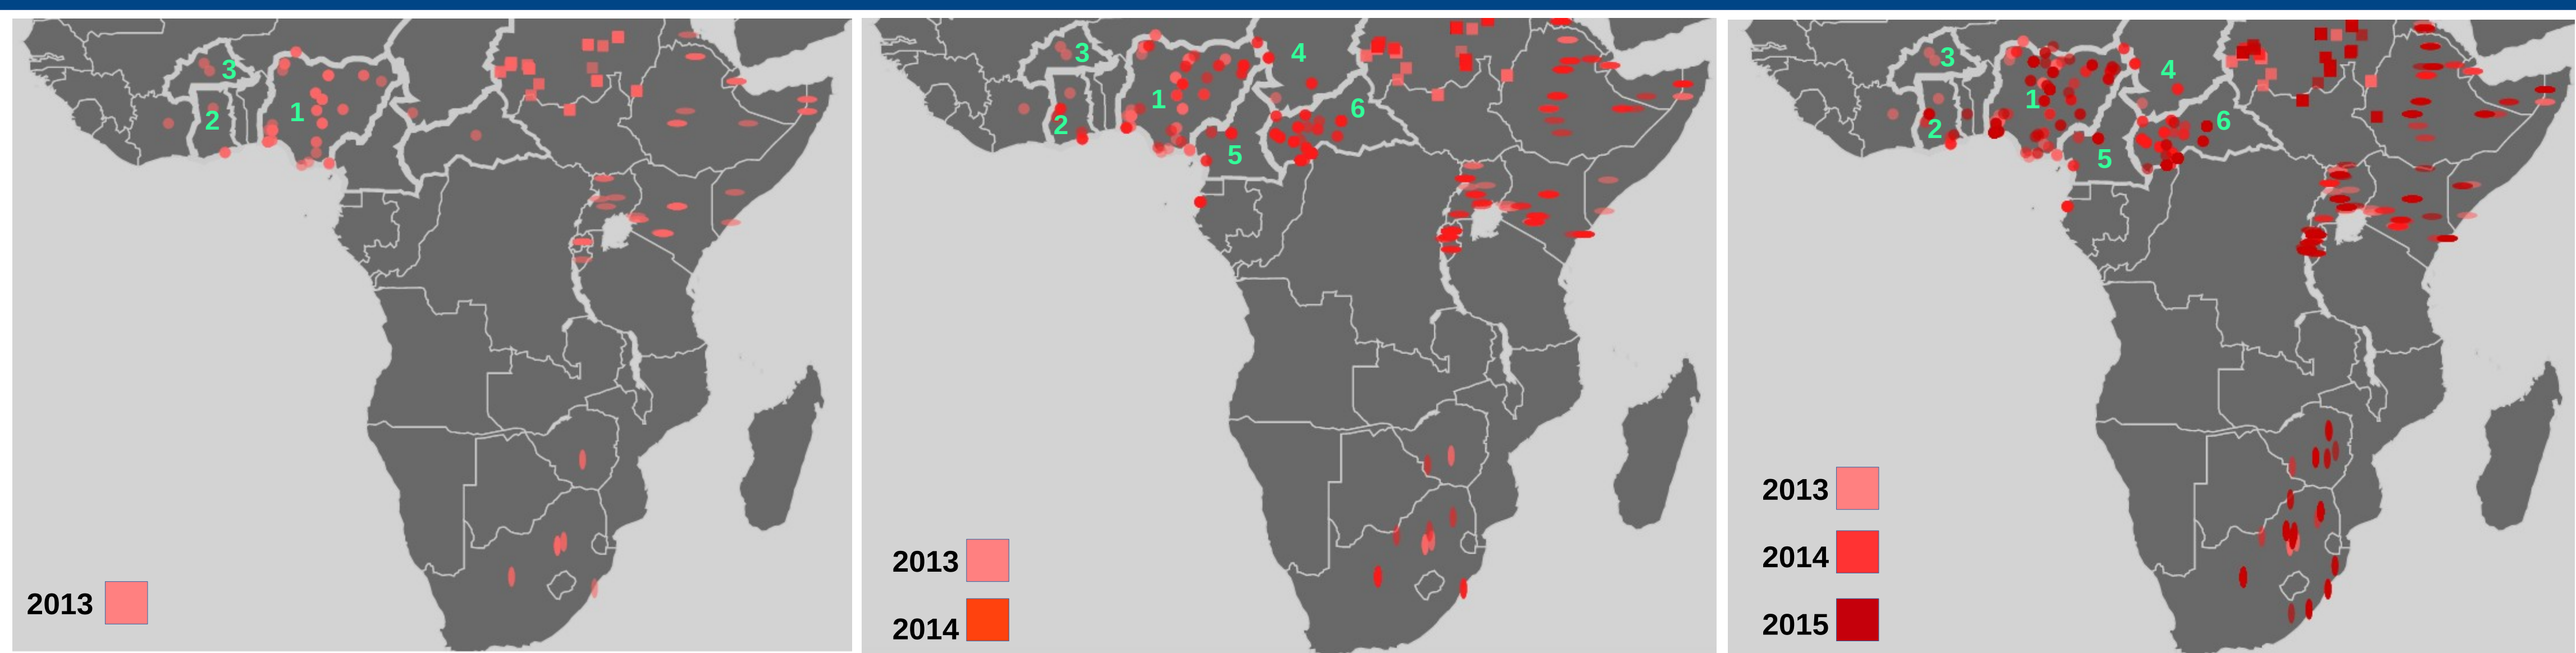

Future Work:

- Finding how the ethnic cleansing counts and human rights violation is associated with HDI of India and its various states.
- Finding connection between democratization and the occurrence of ethnic conflict and human rights violation.

Spatio-temporal distributions of ethnic conflicts and human rights violations:

Ethnic conflicts Localized to Nigeria, Ghana and Burkina Faso Spread to Chad, Cameroon and Central African Republic No. of mentions further increased
Fig 1: Spatio temporal spread of ethnic violence in Africa

- Using dataset1 we obtained the locations where the ethnic violence mentions were reported in the news articles.
- On performing density based clustering we obtained 3 major clusters for Africa mapped to different shapes in Fig 1.
- The color has been mapped to mentions for different years.
- In 2013 cases were localized to 1-Nigeria, 2-Ghana and 3-Burkina Faso.
- In 2014 ethnic violence started spreading in 4-Chad, 5-Cameroon and were reported in large numbers in 6-Central African Republic.
- In 2015 the number of mentions in news reports increased in all these regions.

Statistical analysis of HDI and correlations with the media reports of ethnic conflicts and human rights violations:

- The HDI from dataset 2 and number of mentions reported from dataset1 has been plotted on a spatio temporal visualization in Fig 2.
- We find a negative correlation between the HDI and the number of mentions of ethnic violence Fig 3.
- Fig 4 shows that starting from year 1980 HDI incremented with the decrease in mentions of human rights violation.

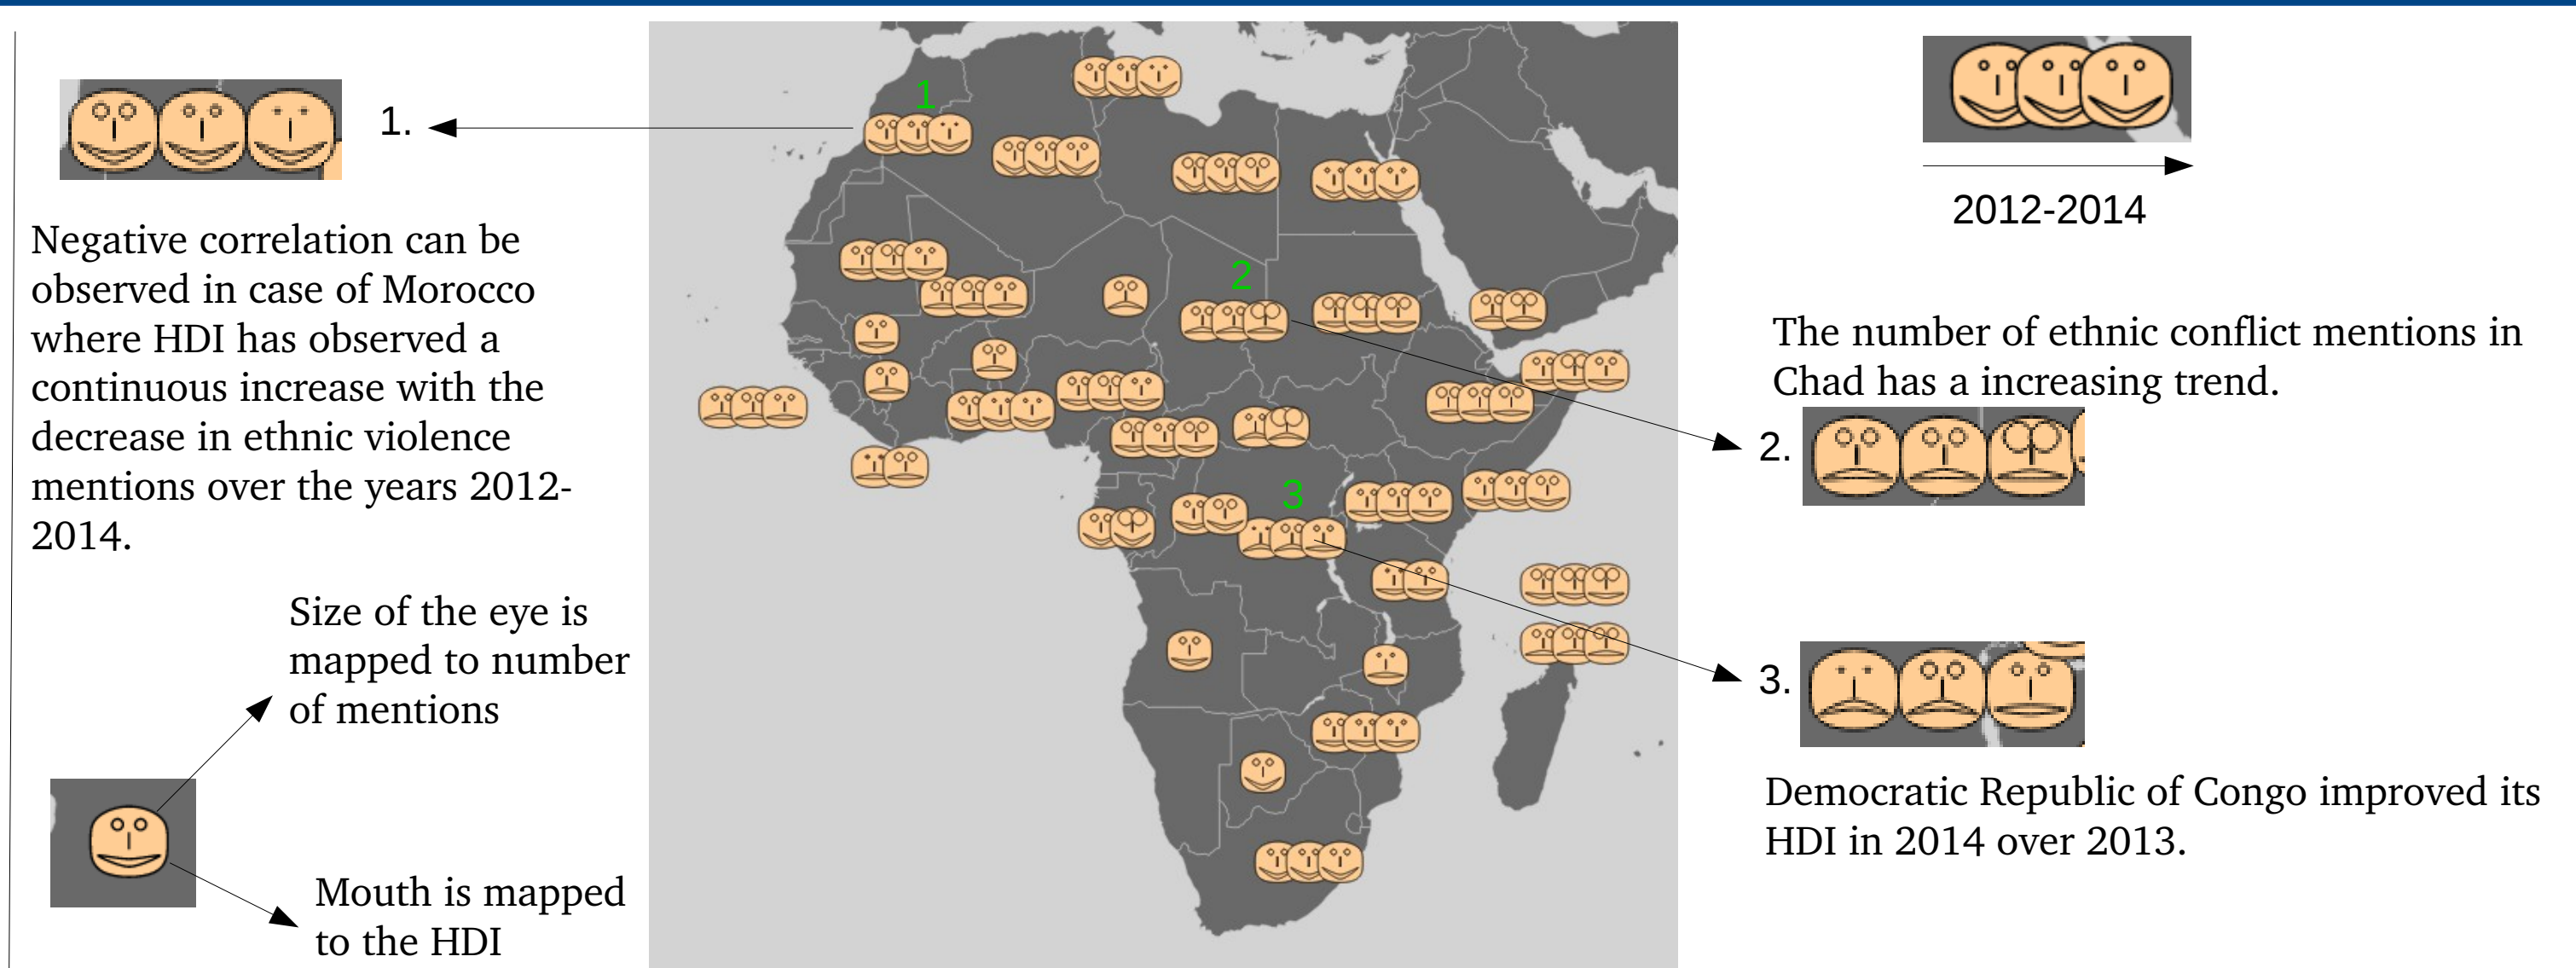

Fig 2 : Spatio temporal distribution of both HDI and number of ethnic violence mentions for different years.

- In recent years human rights violation in these countries has increased. As a result HDI fails to increase.

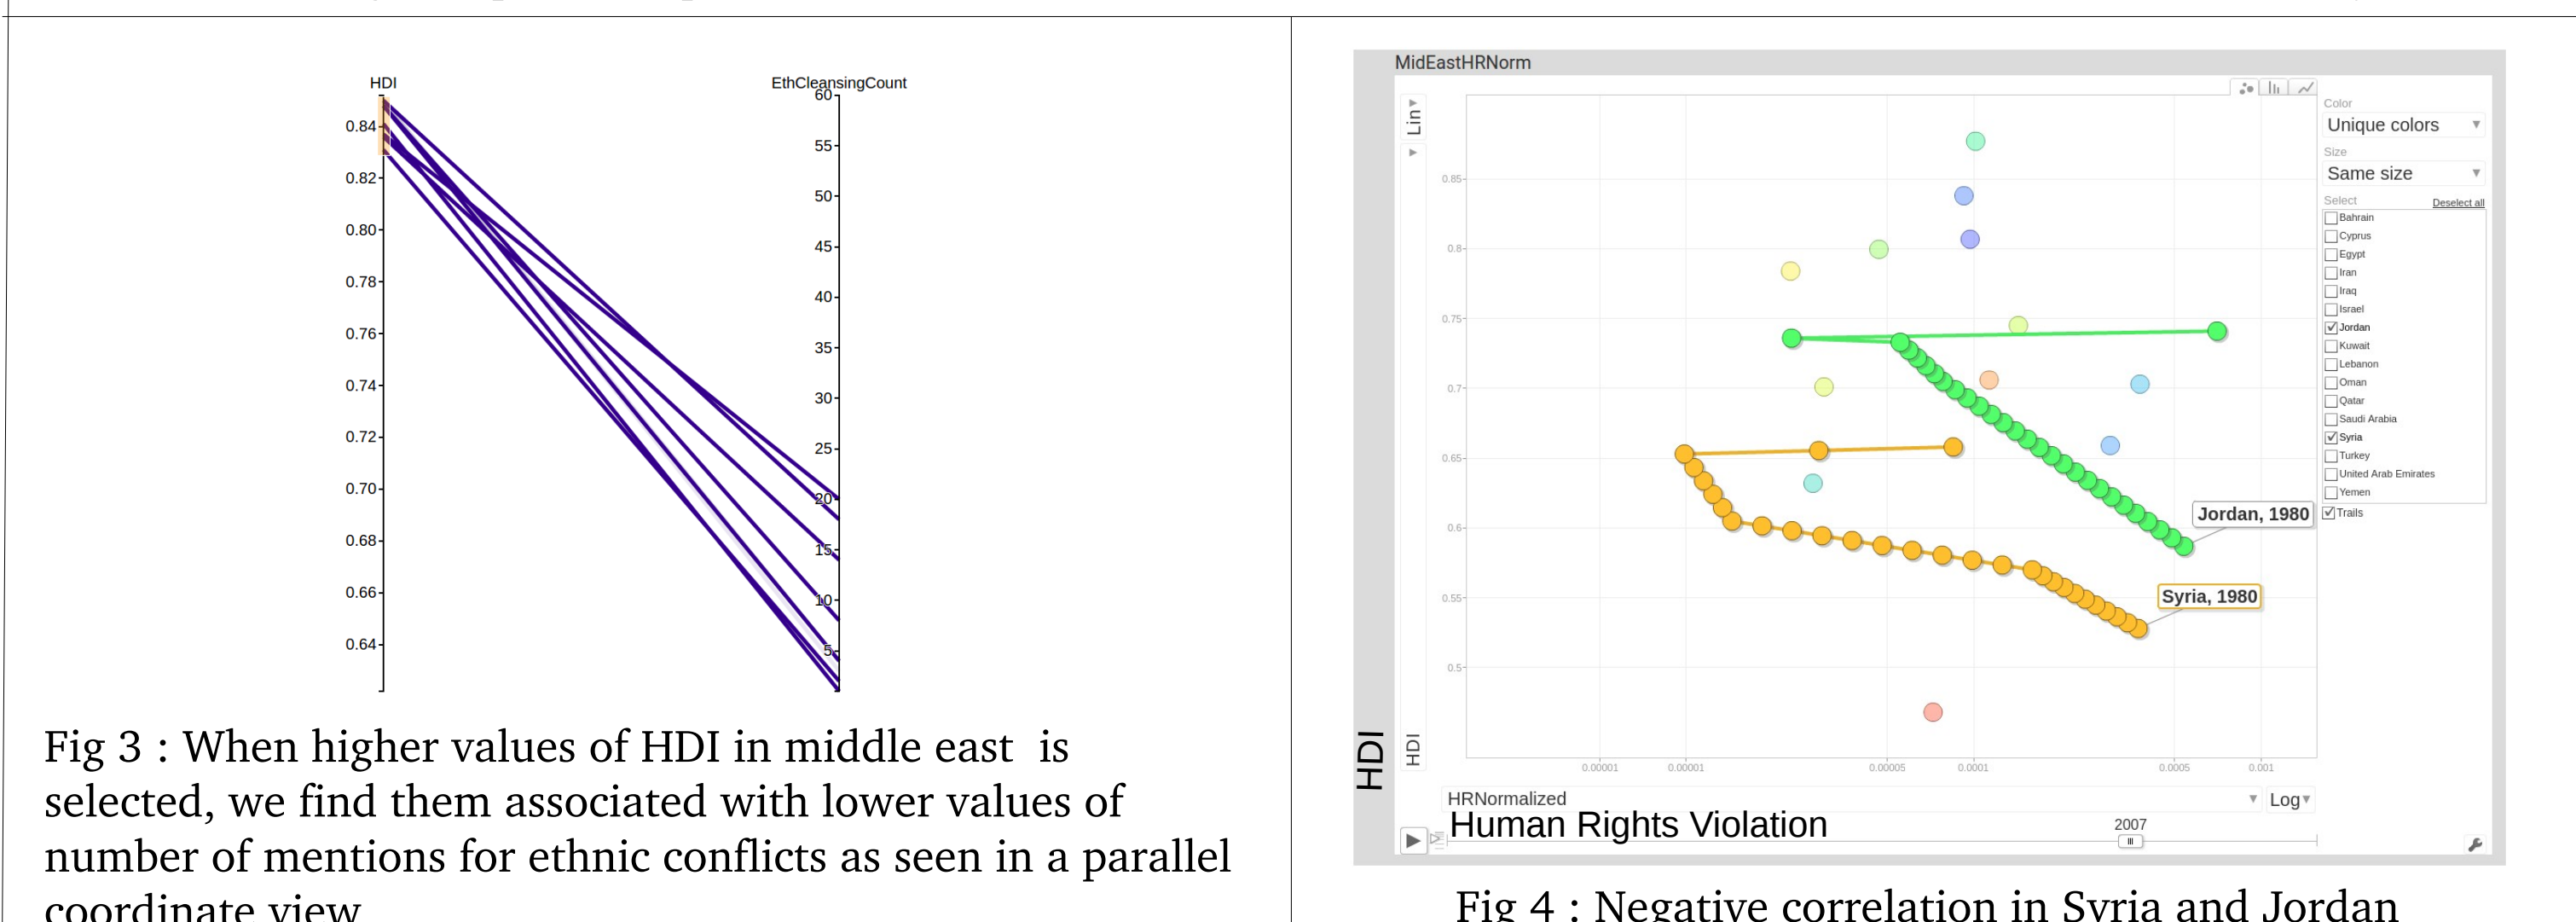

Fig 3 : When higher values of HDI in middle east is selected, we find them associated with lower values of number of mentions for ethnic conflicts as seen in a parallel coordinate view

Fig 4 : Negative correlation in Syria and Jordan

Trends and impact of ethnic conflicts and human rights violations from media reports:

- Used average tone of the articles over the years from dataset1.
- Computed average number of mentions of human rights violation in news articles for different countries and mapped to size of the bubble in Fig 5.
- Fig 6 represents that 1-South Africa, 2-Egypt and 3-Saudi Arabia have lesser number of human rights violation mentions.
- We observe a general trend that the average tone of recent years is negative when compared to past years except for countries like Algeria, UAE, Qatar and Somalia which have a mixed trend.
